Generative AI engineer at **Y Soft** building an AI document-automation platform integrated with ERP systems. Experienced in agentic workflows, LLM evaluation, and shipping Python and TypeScript products end to end. Progressed from wiring networks and automating small businesses to delivering features used by thousands worldwide.

EXPERIENCE

Y Soft
Generative AI Engineer

May 2026 – Present
Brno, CZ

- Build a generative AI **document-automation platform** that turns unstructured business documents into reliable workflows integrated with **ERP systems**.
- Develop and evaluate agentic workflows with **LangGraph, PydanticAI, OpenAI Agents SDK, and Arize Phoenix** on AWS/Kubernetes; work across TypeScript, SQL, and Redis while experimenting with LiteLLM and OpenRouter for model routing.

SolarWinds
Developer

Jul 2024 – Apr 2026
Brno, CZ

- Shipped **C# and React Native** features in a global product used by thousands of customers.
- Engineered a **deduplication algorithm** for entitlement records across distributed service boundaries.
- Built **API monitoring** and internal automation tooling to improve observability and team workflows.

Freelance
Full-Stack Engineer

Jan 2021 – Present
Brno, CZ

- Built internal systems, automations, notification platforms, websites, and network infrastructure for small businesses.
- Owned projects from wiring and solution design through development, deployment, and support.

PROJECTS

Pepa Assistant

- Solo-built and deployed an AI assistant for Czech real estate agencies with conversational property search, an interactive map, and automated scraping across six listing portals.
- Implemented semantic routing, PII redaction, guardrails, conversation persistence, and production deployment on a Linux VPS.

Proud Intelligence

- Built a Czech-first intelligence desk that collects and normalizes signals from RSS/Atom, Hacker News, GDELT, Bluesky, and official sources.
- Implemented URL deduplication, fuzzy story clustering, publisher-aware confirmation, signal scoring, source health monitoring, and threshold-based notifications.

Additional AI Systems

- Built a fully local RAG system with cited streaming answers, a multi-provider LLM evaluation framework, and a context-aware PR review agent that inspects code beyond the diff.

SKILLS

AI / LLM	AI agents, LangGraph, PydanticAI, OpenAI Agents SDK, Arize Phoenix, RAG, LLM evaluation, LiteLLM, OpenRouter
Data & Automation	Document automation, ERP integrations, web scraping, async ingestion, information extraction, SQL, Redis, vector search
Languages	TypeScript, JavaScript, C#, Python, SQL, C
Frameworks	React, React Native, Next.js, .NET, FastAPI
Tools	AWS, Kubernetes, Docker, Git, PostgreSQL, SQLite, Linux, Nginx, REST APIs
Spoken	English (Professional), Czech (Native), German (Elementary)

EDUCATION

Masaryk University · B.Sc. Informatics

Sep 2021 – Jan 2024, Brno

Relevant Courses: Algorithms, Database Systems, Software Engineering, Computer Networks, Operating Systems
